SUMMARY

AWS Certified Cloud Practitioner and 3rd-year CSE (AIML) student with hands-on expertise in cloud security engineering and AI-driven threat detection. Built and deployed tools for IAM misconfiguration auditing, Linux server hardening (CIS Benchmark), and ML-based log anomaly detection on live AWS infrastructure. Pursuing CompTIA Security+ to formalize expertise in threat detection and incident response. Passionate about securing cloud workloads and AI systems against evolving attack surfaces.

EDUCATION

Bachelor of Engineering in CSE (AIML) RATHINAM TECHNICAL CAMPUS CGPA: 7.45/10	09/2023 – Present
Higher Secondary Certificate (HSC) SMA MATRIC HR SEC SCHOOL Marks: 84.3/100	06/2022 – 04/2023

CERTIFICATES

AWS Certified Cloud Practitioner Amazon Web Services (AWS)	Apr 2026 - Apr 2029
Certified AI Foundations Associate Oracle	Jul 2025 - Jul 2027
TATA Cybersecurity Analyst Simulation Forage	Jan 2025
Cisco Introduction to Cybersecurity Cisco Networking Academy	Dec 2024

SKILLS

Cloud & Security: AWS (IAM, VPC, S3, CloudTrail), Threat Detection, SIEM , Zero Trust

Programming: Python, Bash Scripting, Linux

Networking: TCP/IP, DNS, Firewalls, OSI Model

Tools: Git, GitHub, PuTTY, Ubuntu

PROJECTS

AWS IAM Security Auditor - Built an automated Python + Boto3 CLI tool that scans AWS accounts for critical IAM misconfigurations including users without MFA, exposed root keys, wildcard permissions, and public S3 buckets; generates colour-coded HTML + JSON audit reports with severity ratings - Validated findings against AWS security best practices and least-privilege principles, producing actionable remediation steps per finding with full project documentation and architecture on GitHub	02/2026 – 03/2026
Linux Server Security Hardening Toolkit - Developed a Bash automation suite that hardens Linux servers by enforcing SSH key-only authentication, configuring UFW firewall rules, blocking brute-force attacks via Fail2Ban, and disabling unnecessary services against CIS Benchmark standards - Deployed and validated on AWS EC2 instance; generated before/after compliance reports with pass/fail status per security control and documented full hardening procedure on GitHub	03/2026 – 05/2026
AI-Powered Linux Log Anomaly Detector - Built an ML-based anomaly detection engine using Isolation Forest that parses real Linux auth.log and syslog files to automatically identify threats including brute-force attempts, unusual login patterns, and privilege escalation with severity scoring - Visualised detection results using matplotlib, validated against simulated attack scenarios on a live Linux system, and documented model logic, threat coverage, and findings on GitHub	05/2026 – 07/2026

AWARDS

Gen-Z Hackathon Rathinam Technical Campus	10/2025
Rajya Puraskar The Bharat Scouts and Guides	01/2025

LANGUAGES

English: Professional working proficiency | **Tamil:** Native proficiency
